Name	Contribution	Percentage
James Nolan	- Main task was creating an admin feature - Created admin role for users - Restricted user pages to admin only - Restricted all index pages to only admins - Restricted various other item edit features to admin/item owner only - Also assisted Nitin with bug fixes for map features	25
Nitin Pendekanti	- Fixed bugs with map where you can open and close map for each individual map - Fixed interval for add time slot where time slots were added with 30 minute intervals rather than being able to set the end time	15
Hunter Pearson	**Scrum Master** Completed 5 stories and 3 chores during the sprint. - Added a feature for anyone to view the donor pages to see items and reviews, and added a link to the donor page to item. - Updated student/donor pages to	50

	show timeslot in the request, and overall styling of those views. ● Added additional seeding to have more colors, types, and sizes, as well as additional items on the home page. ● Improved styling of item creation pages and sizes displayed in item creation are dynamically displayed when the user selects the type of clothing. ● Edited the sizing creation to allow for a type to be associated with creation. ● Revamped the filter to be drop-down menus instead of radio buttons ● Updated the styling of the chatroom pages ● Added additional styling throughout the site,	
Jack Sanchez	**Product Owner** Met with the client once a week to give progress updates, demo products and gain an insight into what features they wanted to add. Relayed this info to team/scrum master and approved PRs	10

Sprint Goal:
The main goal for the fifth sprint was to improve the flow of the website like filtering, styling, navigation, and ease of use as well as add any final features such as an administrator page needed to ensure the website is production ready for clients to use.

Sprint Achievements and backlog:

Update the donor and student view pages - changed the donor and student views to improve the look and feel and added time slots to the requests and displayed them there.

Allow users to view donor pages to see reviews and items uploaded - Created a feature for users to view donor pages, added donor link to items, and displayed average rating for the donor.

Update item and time slots creation pages - changed the look of the item and time slots creation pages

Additional Chat Styling - added the item to the chat page and changed the styling for the chat page.

Additional Styling - improved the overall site by updating styling.

Timeslot interval adjustment - updated the time slot interval by locking it at 30 minutes, instead of the user inputting an end time.

Allow creation of new sizes and types - updated sizes creation and edit page to allow for an associated type to be selected
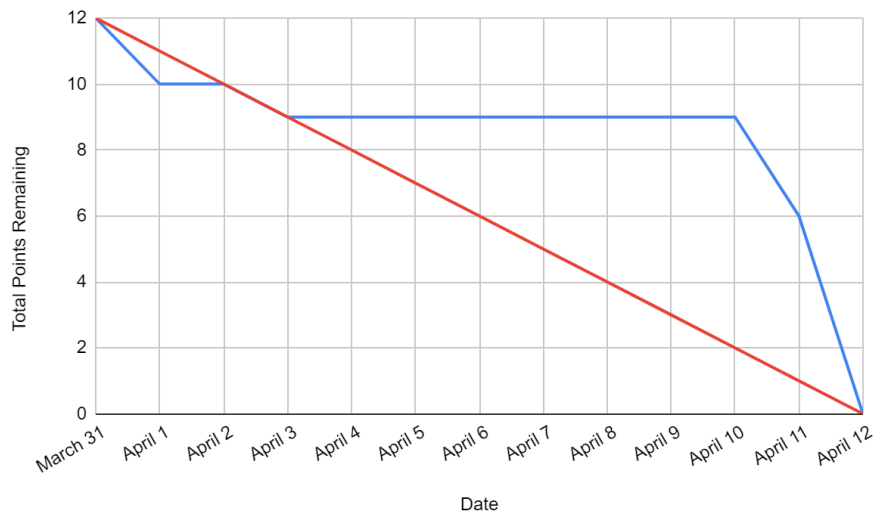

Redesign landing page and type-specific item pages - Updated the look of the home and by_type pages. Revamped the filter to be dropdown menus instead of radio buttons.

Map for requestor location - fixed a bug with the map where you can open and close map for each individual map

Admin User - Created an admin user who can access all pages, and restricted access from some pages for normal users

Add seed data - created more types, sizes, and colors in the seed data and added more items on the home page.

Customer Meeting

- Meeting 1: 4/11
    - Put in discord channel before end of semester:
        - Some screenshots that are visually appealing, representative of the app that would be good for the TeamUp project page
        - Feature ideas, any possible security issues, give Steve bulleted list
    - Idea for filtering: have a person able to include in their profile their preferred sizes, have a visual reminder that the filter is on, give the user ability to edit/remove those filters on their profile
    -
- Meeting 2: 4/18
    - Size is currently the only type-specific filter needed
    - Implement material design styling approach for advanced styling that are modern
    - Post a link to the Github repo so that teamup can host it themselves. Let the client know if there are deployment-specific problems. Create a recipe with OAuth, AWS, javascript, etc. Determine how to hand over AWS account and Heroku deployment to TeamUp.
    - Consider the privacy concerns of the website. In particular, try to change the OAuth handling to the backend such that Ruby handles it and the frontend javascript does not.

Design Diagram
There were no design diagram updates this sprint.

Code Quality and Tests

Cucumber and Rspec:
        Rspec: 199 examples, 0 failures
        Cucumber: 63 scenarios (63 passed)
                501 steps (501 passed)

Rubocop:
        0 issues
